ALEX CHEN
Data & GenAI Engineer | alex.chen@example.com | github.com/alexchen | linkedin.com/in/alexchen

PROFESSIONAL SUMMARY
Results-driven Data Engineer with experience building serverless ETL pipelines, relational data models, and local RAG search

TECHNICAL SKILLS
- Programming Languages: Python, SQL, Bash
- Data & Machine Learning: Pandas, NumPy, Scikit-Learn, ChromaDB, RAG, Embeddings, Ollama
- Data Engineering & Cloud: AWS Lambda, Amazon S3, PostgreSQL, SQLite, Docker, Git, CI/CD
- API Frameworks: FastAPI, REST API

FEATURED PROJECTS

1. AWS Serverless ETL Pipeline
- Architected automated data ingestion pipeline using AWS Lambda and Amazon S3 to process 250,000+ daily JSON transac
- Implemented data validation and cleaning routines in Python, loading transformed structured tables into PostgreSQL.
- Reduced data ingestion latency by 35% through concurrent batch processing.

2. Document Search & RAG Assistant
- Built a local Retrieval-Augmented Generation (RAG) assistant using FastAPI, ChromaDB, and sentence-transformers.
- Indexed 500+ technical documentation pages into 384-dimensional vector embeddings for cosine similarity retrieval.
- Integrated Ollama local LLM for context-grounded Q&A with strict anti-hallucination prompt constraints.

EDUCATION
Bachelor of Science in Computer Science, 2024
